ABOUT

International River-Basin Foundation-WCPI and River Water User Association(India), being a key analytical and discussion forums over last decade for sustainable development activities by involving people throughout the world proposed to discuss the issues raised in their past national and International conferences, and to encourage world focus on adoption and mitigation strategies to achieve the sustainable development goals. The first world conference on Water, Agriculture and Climate is an effort to bring concerned scientists and researchers together in an International event to present their research success and field initiatives and to analyse, discuss and review their findings with world renowned scientists, academicians and decision makers. The aim is to inform solutions and policies for a “more sustainable World”.
